

Onboarding Accelerator - Deployment and Migration Assistance for Advanced Threat Analytics (ATA)

Onboarding Accelerator

A proactive service based on Microsoft Recommended Practices and Field Engineering experience

Benefits

- *Microsoft Advanced Threat Analytics (ATA) provides a simple and fast way to understand what is happening within your network.*
- *ATA provides a solid understanding of the threats that the Solution detects.*
- *Identify suspicious user and device activity with built-in intelligence that provides clear and relevant threat information on a simple attack timeline.*
- *Be prepared to respond appropriately to detected threats with appropriate training.*

Overview

Attackers are becoming more and more sophisticated, using legitimate user credentials and tools to take over your network and expose you to liability. Traditional IT security tools can provide only limited protection in many of these scenarios. Threat detection solutions usually rely heavily upon domain expertise and a well-thought-through response process.

The Onboarding Accelerator for Advanced Threat Analytics (ATA) has been created to leverage our experiences, to help you quickly and efficiently begin the implementation of Microsoft Advanced Threat Analytics. We do this by providing educational workshops to prepare your staff and assisting you with implementing ATA in a limited manner.

Summary of Deliverables

To summarize, the service would offer the following (all the phases include knowledge transfer):

Options	Phases	Deliverables
Base	Phase 1	<ul style="list-style-type: none"> • Designing and Planning session • Educational workshops on Advanced Threat Analytics • Incident response • Threat Detection • Production deployment • Event rationalization
	Phase 2	<ul style="list-style-type: none"> • Backup and Restore of ATA • Rationalization Production Alerts • Hardening of ATA implementation • Additional reporting • Monitoring • Troubleshooting of ATA • Securing network access to ATA • Windows Event Forwarding
Premium		

Delivered by highly experienced engineers from Microsoft, the Onboarding Accelerator for ATA helps you:

Know the risks that these threats pose to your organization by understanding the threats that ATA detects.

Understand the importance of a Security Incident Response Plan so you are able to react positively for your business when ATA detects something in your environment.

Consistently detect threats posed against your credentials by helping you deploy the core components of ATA to begin providing detection services for your production Active Directory Domain Services environment.

Key Focus Areas

Educational Workshops

- Understanding Common Threats
- ATA Overview for a broad audience
- ATA Technical Deep-Dive training
- Understanding the Importance of a Security Incident Response Plan

Limited Production Deployment:

- Assist with planning your ATA deployment
- Assistance with deploying a single ATA Center
- Assistance with deploying a single ATA gateway

Key Deliveries:

- Educational workshops
- Limited production deployment of ATA

The Two Phases ATA-base deployment, integration with the on-premises server workload

Delivery Options and Price

The Onboarding Accelerator – Deployment and Migration Assistance for the Advanced Threat Analytics service is offered in two options

Options	P1	P2
Base	X	
Premium (Full)	X	X

- Base is the minimum delivery option, which includes only P1 (the mandatory phase).
- Premium includes both the phases (P1-P2), and P1 is the mandatory phase.

Outcomes

- Guidance through interactive planning and working sessions
- Accelerate the deployment process
- Decrease the time to define the requirements and dependencies
- Reduce the risk of impactful events
- Alignment with Microsoft recommended deployment practices

Prerequisites for delivery:

- Physical or Virtual hardware to install Advanced Threat Analytics
- Windows Server 2012 or Windows server 2016 Operating System
- Active Directory with a Forest Functional level 2003 or higher
